

Project Details

ROSES ID: NNH05ZDA001N

Selection Year: 2006

Program Element: Focused Science Topic

Topic: Storm effects on the global electrodynamics and the middle and low latitude ionosphere

Project Title:

Sub-Auroral Polarization Streams Effects on the Ionosphere and Thermosphere

PI Name: Elsayed Talaat

PI Email: elsayed.talaat@jhuapl.edu

Affiliation: The Johns Hopkins University Applied Physics Laboratory

Project Member(s):

- Anderson, Brian J; Co-I; JHU/APL
- Hairston, Marc ; Co-I; University of Texas at Dallas
- Paxton, Larry J; Co-I; Johns Hopkins University
- Sotirelis, Thomas ; Co-I; JHU/APL
- Yee, Jeng-Hwa ; Co-I; Johns Hopkins University, Applied Physics Laboratory
- Rich, Frederick J.; Collaborator; MIT Lincoln Laboratory
- Ruohoniemi, John Michael; Collaborator; Virginia Polytechnic and State University
- Greenwald, Raymond A.; Collaborator; null
- Brandt, Pontus C.; Collaborator; The Johns Hopkins University Applied Physics Laboratory

Summary:

The coupling processes within the magnetosphere/ionosphere/thermosphere system are a key area of research in the Sun Earth Connections theme. One dramatic manifestation of this coupling is enhanced sub-auroral electric fields, labeled sub-auroral polarization streams (SAPS) or sub-auroral ion drifts (SAID) (Galperin et al., 1973; Spiro et al., 1978, respectively). These events are of great importance in determining the temporal evolution of the ring current and thermal plasma distribution in the magnetosphere, ionosphere and plasmasphere.

In this proposal we will create a climatological picture of SAPS/SAID, including their conjugacy, frequency, and intensity. We will also investigate the mechanisms behind their formation and duration and the effect that SAPS/SAID have on ionospheric density and thermospheric composition through analysis of multi-satellite observations and simulations using the NCAR Thermosphere Ionosphere Electrodynamics General Circulation Model (TIE-GCM).
