

Topic: Joint Focus Topics with Planetary Science: Extreme Space Weather Events in the Solar System

Project Title:

Simulations of the Effects of Extreme Solar Flares on Technological Systems at Mars

PI Name: Paul Withers

PI Email: withers@bu.edu

Affiliation: Boston University

Collaborator(s):

- Michael Mendillo (Boston University)
- Marina Galand (Imperial College London)
- Phillip C Chamberlin (University of Colorado/LAS)

Project Information:

We propose to study the effects of extreme solar flares and other disturbances on the Mars ionosphere in support of the Joint Focus Topic on Extreme Space Weather Events. Such flares will increase plasma densities at relatively low altitudes on timescales of minutes to hours. Ionospheric total electron content will change, affecting the accuracy of GPS-like navigation systems. Radio wave attenuation due to D-region absorption will change, affecting communications systems. GPS range error and radio signal attenuation will be calculated from a suite of ionospheric simulations. Several different flares will be simulated using time-dependent solar irradiances. Solar zenith angle and other model inputs will be varied to explore parameter space.

ROSES ID: NNH07ZDA001N

Duration:

Selection Year: 2008

Program Element: Focused Science Topic
